

VRK series

Vandal resistant door entry systems from **bell**system

The VRK Vandal Resistant Door Entry Systems have been devised for buildings that may be prone to external vandalism.

The system can have a range of options including; surface mounting panels, extra engraving and a tradesmen entry facility.

These systems are available from a one way (model VRK1) up to any size.

The model VRP panels are manufactured from 2.5mm 316 marine grade* stainless steel.

All panels are flush mounted and fixed to the back-box by tamper proof bolts (a special key is required to remove the panel).

A vandal resistant button is provided for each flat and optionally one for Tradesmen.

Model VRK1

1 way system

Model VRK3

3 way system (with logo)

Model VRK4 + TRVRK

4 way system with trade facility
(with extra engraving)

Model VRK8-S + TRVRK

8 way surface system with trade facility

Each panel is custom engraved to client's specifications using the Panel Designer software, which creates a dimensioned drawing of the panel for customer approval prior to manufacture.

The engraving of flat numbers is included in the price of each system. Further engraving (e.g. Block names) can be included for a modest surcharge.

Ordering Information

Order a model VRK1 for a complete single station system. For multi-way systems order a model VRK n, where n is the number of stations. e.g. a model VRK14 is a complete 14 station system. For surface systems add -S to the order code e.g. VRK14-S.

For tradesmen entry facility, simply add TRVRK to any given system e.g. a six station system with trades facility is a model VRK6 + TRVRK (A model TS2000-BST time clock is included).

**Despite using the highest quality of 316 marine grade stainless steel panels can still be prone to tarnishing in some coastal locations or in areas of industrial pollution. If in doubt about the suitability of these panels in your area please contact us for advice.*
