

TS 93

Versatile and elegant

The TS 93 cam action door closer system provides a high-quality architectural solution for all project application requirements. The proven dormakaba technology featuring the heart-shaped cam ensures exceptional ease of opening.

The new Contur design offers an even more impressive specification - thanks to

- concealed fixings
- height-adjustable G-N slide channel
- delayed closing action as standard
- smoke detector integrated in the slide channel
- simple, fast installation

TS 93 N

TS 93 EMF

TS 93 EMR

Rapidly decreasing opening force

The TS 93 system's unique cam technology sets it apart from conventional door closer systems. The resistance encountered when opening the door is instantly reduced, offering an easy opening action much appreciated by, in particular, children and older people.

Force profile

TS 93 (Spring strength EN 3)
Nm

— Closing force

Our commitment to a sustainable future

We are committed to sustainable development as one of our business maxims. dormakaba's aim is to ensure energy-saving and resource-conserving production, a high recycling ratio and the longevity of our quality products. Environmental Product Declarations (EPD), based on a holistic life cycle assessment, are used for the calculation of the sustainability of buildings.

EPD certificates are on www.dormakaba.com available.

Cam action door closer system TS 93

The perfect project solution for all application needs

The TS 93 cam action door closer system sets new standards in user convenience in project applications. The proven dormakaba technology of the heart-shaped cam ensures exceptional ease of opening.

The TS 93 series comprises a modular system which enables just a few door closer models to be combined with a number of different slide channels to meet virtually every conceivable functional requirement.

Doors of varying designs can be equipped for a wide range of different applications.

Plus points...

...for the trade

- Clear product allocation ensures use of the right models for the right applications.
- Identical door closer model for single and double doors.

...for the installer

- The TS 93 system is suitable for all fixing positions.
- Mounting bracket with universal fixing hole pattern for optimal fixing.
- Simple, fast installation.

...for the specifier/architect

- High-quality design ensures an ideal solution for all project applications.
- Harmonious appearance thanks to integral smoke detector.
- Available in a wide range of colours and finishes.

...for the user

- Easy opening action and fully controlled closing.
- Smoke detector with convenient service and maintenance indicator.
- Adjustable hydraulic functions for easy adaptation to each specific door situation.

¹⁾ B = Standard model for pull-side door leaf fixing/push-side transom fixing

G = Special model for push-side door leaf fixing/pull-side transom fixing.

²⁾ For applications involving particularly heavy or wide doors, and doors which have to close against wind resistance, the next highest door closer size should be selected, or the closing force adjusted to a higher setting.

Standard mounting backplate with universal fixing hole system

This mounting backplate with its universal hole system, including hole pattern to supplementary sheet 1 of DIN EN 1154 A, ensures ideal fixing whatever the conditions and irrespective of the door type. The fixing hole patterns are the same for both sizes of the TS 93. Additional mounting plates/brackets are no longer required. Alignment dowels on the mounting backplate facilitate location of the closer body.

- 1 Fully controlled closing action with adjustable speed
- 2 Adjustable latch speed
- 3 Adjustable backcheck
- 4 Adjustable delayed action

Backcheck

The backcheck feature ensures the safe deceleration and restraint of a door which has been flung open or caught by a gust of wind. This effectively reduces the danger of the door and adjacent wall being damaged.

- 3 Adjustable backcheck

Delayed action

The delayed action feature retards the closing cycle between 120° and 70° (approximate values for pull-side door leaf fixing). The extra time allowed for passage through the doorway can be essential for people with luggage or bulky items: mothers with prams, personnel with tea trolleys, post trolleys, hospital beds, etc.; and also for disabled people.

- 4 Adjustable delayed action

Pull-side door leaf fixing

Door leaf fixing (standard arrangement) of the TS 93 B on the pull side. Structural conditions permitting, an opening angle of 180° is possible with this fixing method. In most cases, a wall recess may have to be provided for the door closer.

F Approval certification

The TS 93 B is CERTIFIRE approved (Certificate No. CF 119) for door types ITT 120, MM/IMM 240.

Example: Anticlockwise-closing (ISO 6) door; mirrored arrangements apply to clockwise-closing (ISO 5) doors.

Push-side transom fixing

Transom fixing (overhead frame fixing) of the TS 93 B on the push side. Backcheck and delayed action non-operative with this fixing arrangement. The door opening angle is limited to approx. 120° to 145°, depending on the structural conditions. In order to prevent damage to the wall and door, a door stop should be installed to limit the maximum angle of door opening.

F Approval certification

The TS 93 B is CERTIFIRE approved (Certificate No. CF 119) for door types ITT 120, MM/IMM 240.

Example: Anticlockwise-closing (ISO 6) door; mirrored arrangements apply to clockwise-closing (ISO 5) doors.

Push-side door leaf fixing

Door leaf fixing (standard installation) of the TS 93 G on the push side.

The door opening angle is limited to approx. 120° to 145°, depending on the structural conditions. In order to prevent damage to the wall and door, a door stop should be installed to limit the maximum angle of door opening.

A door stop must be installed for fire and smoke doors.

F Approval certification

The TS 93 G is CERTIFIRE approved (Certificate No. CF 119) for door types ITT 120, MM/IMM 240.

Example:
Anticlockwise-closing (ISO 6) door; mirrored arrangements apply to clockwise-closing (ISO 5) doors.

Pull-side transom fixing

Transom fixing (overhead frame fixing) of the TS 93 G on the pull side.

Structural conditions permitting, an opening angle of 180° is possible with this fixing method.

F Approval certification

The TS 93 G is CERTIFIRE approved (Certificate No. CF 119) for door types ITT 120, MM/IMM 240.

Example:
Anticlockwise-closing (ISO 6) door; mirrored arrangements apply to clockwise-closing (ISO 5) doors

G-N slide channel

The **G-N slide channel** assembly incorporates the slide arm, slide channel, slide block, fixing adapters, screws and end caps.

The G-N slide channel assembly is non-handed and can be combined with all door closer models. Thanks to oblong holes in the fixing adapters, the slide channel can be effectively adjusted to variations in the drill hole pattern while keeping the gap between door closer body and slide channel aligned and parallel.

F Approval certification

The G-N has been successfully type-tested to EN 1154 in conjunction with the TS 93. Certificates are available on request.

Hold-open unit

The **RF hold-open unit** enables doors to be securely held without any fall-back at precisely the required position up to an opening angle of approx. 150°. The hold-open function can be easily switched on and off by the user, and the release force can be adjusted to the door type concerned.

The RF mechanism is non-handed and has been specifically designed for retrofitting to the G-N type standard slide channel. The suitability of the hold-open unit may be limited where the closer unit is fixed to the door leaf on the push side, in combination with outward-opening doors, and also in the case of large, heavy doors.

Not for fire and smoke doors.

Cushioned limit stay

Accessories for the G-N, RF slide channel: **Cushioned limit stay** for retrofitting to the slide channel.

Adjustable between 80° and **max. 120°**. The cushioned limit stay prevents the door from hitting the adjacent wall when opened normally.

The cushioned limit stay is not a heavy-duty protective device and in many applications cannot substitute for a door stop.

TS 93 B door closer with G-N slide channel assembly, door leaf fixing on the pull side and transom fixing on the push side.
Examples: Anticlockwise-closing (ISO 6) door; mirrored arrangements apply to clockwise-closing (ISO 5) doors.

TS 93 G door closer with G-N slide channel assembly, door leaf fixing on the push side and transom fixing on the pull side.
Examples: Anticlockwise-closing (ISO 6) door; mirrored arrangements apply to clockwise-closing (ISO 5) doors.

G-EMF slide channel with electro-mechanical hold-open

The **G-EMF** slide channel assembly enables the door to be held open securely at a preselected position without fall-back. The hold-open point can be adjusted within an opening angle of approx. 80° and 140°.

Note

The active leaf can be opened up to the maximum selected hold-open point (door stop to be positioned accordingly).

In the event of an alarm or a fault in the power supply, the hold-open is released and the door is closed by the door closer. The release is triggered by a signal from external smoke detectors (e.g. RMZ or RM). The release force for the hold-open mechanism can be adjusted without tools and is rated to ensure that the door can also be easily released manually. The G-EMF slide channel assembly comprises the slide arm, slide channel, slide block, electro-mechanical hold-open unit, cover, fixing screws and end caps. The G-EMF is transom-fixed and non-handed.

In the case of particularly large and heavy doors (over 1250 mm), or doors in which the hold-open point required exceeds 140°, we recommend that EM hold-open magnets in conjunction with the RMZ central smoke detector be employed instead of the electro-mechanical hold-open unit.

Technical data

Operating voltage	24 V DC, ± 15%
Power input	1.4 W
Rated for continuous duty	100% ED
Release force	adjustable

TS 93 B closer with G-EMF slide channel assembly, pull-side fixing

Example: Anticlockwise-closing (ISO 6) door; mirrored arrangements apply to clockwise-closing (ISO 5) doors.

TS 93 G closer with G-EMF slide channel assembly, push-side fixing

Example: Anticlockwise-closing (ISO 6) door; mirrored arrangements apply to clockwise-closing (ISO 5) doors.

F Approval certification

The TS 93 EMF has been successfully type-tested to EN 1155, Electrically Powered Hold-Open Devices. Certificates are available on request.

Regulations/Information

The use of hold-open devices may be subject to certain conditions – see page 27.

Example application

Hold-open system on a fire and smoke door, comprising: TS 93 B door closer, G-EMF slide channel assembly, RMZ (smoke sensor, release switching unit and stabilised power pack for 24 VDC) as frame-mounted smoke detector, plus one RM-N smoke detector on both sides of the door. (See also page 22.)

G-EMR slide channel electro-mechanical hold-open and integral smoke detector

The **G-EMR** slide channel assembly enables fire and smoke doors to be held open securely at precisely the angle required, and monitored and controlled completely independently of other systems. The hold-open point can be adjusted to opening angles between approx. 80° and 140°.

Note

The active leaf can be opened up to the maximum selected hold-open point (door stop to be positioned accordingly).

Technical data

Power supply	230 V AC $\pm$ 10%
Operating voltage (internal)	24 V DC
Max. output rating	9.8 W
Power input EMF	1.4 W
Rated for continuous duty	100% ED
Release force	adjustable

detailed data see page 22

In the event of an alarm or a fault in the power supply, the hold-open is released and the door is closed by the door closer. The release force for the hold-open mechanism can be adjusted without tools and is rated to ensure that the door can also be easily released manually. The G-EMR slide channel assembly comprises the arm, slide channel, slide block, electro-mechanical hold-open unit, smoke detector, power pack, cover, fixings and end caps. It is non-handed, enabling use with both RH/ISO 5 and LH/ISO 6 doors.

A floating (volt-free) alarm contact and connections for further detectors and external manual release devices are provided. The G-SR-EMR DCW® slide channel assembly is also available without a power pack for integration in building management and control systems via a DCW® bus and the TMS door management system.

In the case of particularly large and heavy doors (over 1250 mm), or doors in which the hold-open point required exceeds 140°, we recommend that EM hold-open magnets be employed instead of the electro-mechanical hold-open unit, in conjunction with the RMZ-K/S frame-mounted smoke detector.

TS 93 B closer with G-EMR slide channel assembly, pull-side fixing

Example: Anticlockwise-closing (ISO 6) door; mirrored arrangements apply to clockwise-closing (ISO 5) doors.

TS 93 G door closer with G-EMR slide channel assembly, push-side fixing

Example: Anticlockwise-closing (ISO 6) door; mirrored arrangements apply to clockwise-closing (ISO 5) doors.

F Approval certification

The TS 93 EMR has been successfully type-tested to EN 1155, Electrically Powered Hold-Open Devices. Certificates are available on request.

Regulations/Information

The use of hold-open devices may be subject to certain conditions – see page 27.

The smoke detector unit has to be replaced after 8 years according to DIN 14677. Having reached the replacement time, a light-emitting diode will light continuously.

Example application

Hold-open system on a fire and smoke door, comprising: TS 93 B door closer, G-EMR slide channel assembly, plus one RM smoke detector on both sides of the door. (See also page 22.)

G-SR door co-ordinator slide channel Pull side fixing

The G-SR slide channel with integral door co-ordinator featuring a push rod clamping system for **double doors**, ensures that the active leaf always closes after the inactive leaf. As this system operates independently of the door closer hydraulics, it offers maximum safety and reliability (doors prevented from "creeping closed").

An overload release protects both the door co-ordinator and the door set from damage. The G-SR door co-ordinator is non-handed and suitable for combination with TS 93 B door closers.

F Approval certification

The TS 93 G-SR has been successfully type-tested to EN 1158, Door Co-ordinator Devices. Certificates are available on request.

G-SR-EMF with electro-mechanical hold-open G-SR-EMR with integral smoke detector

These door co-ordinators not only ensure the correct closing sequence of double doors, but also allow the door leaves to be individually held open. In the event of an alarm or power failure, the hold-open is released and the door is closed by the door closer. The release action is triggered by a signal from the smoke detector integrated in the G-SR-EMR door co-ordinator.

The G-SR-EMR DCW® door co-ordinator model is also available without a power pack for integration in building management and control systems via a DCW® bus and the TMS door management system. The pull-off force for the hold-open mechanism can be adjusted without tools and is rated to ensure that the door can also be easily released manually. G-SR-EMF and G-SR-EMR door co-ordinators are non-handed and suitable for combination with TS 93 B door closers. In the case of doors in which the hold-open point required exceeds 130°, we recommend that EM hold-open magnets be applied instead of the electro-mechanical hold-open unit.

Regulations/Information

The use of hold-open devices may be subject to certain conditions – see page 27.

The smoke detector unit has to be replaced after 8 years according to DIN 14677. Having reached the replacement time, a light-emitting diode will light continuously.

G-SR-EMF 1

This door co-ordinator contains just one hold-open mechanism, located in the inactive leaf slide channel, for holding open both door leaves. The single-point hold-open position is adjustable between approx. 80° and 130°.

Note

The active leaf can be opened up to the maximum selected hold-open point (door stop to be positioned accordingly). The active leaf can be held open by the door co-ordinator at any angle up to max. 150°.

G-SR-EMR 1

This door co-ordinator includes an integral smoke detector. A floating (volt-free) alarm contact and connections for further detectors and external manual release devices are also provided. Technical data for smoke detectors: see page 22.

G-SR-EMF 2

With this door co-ordinator, the active leaf can be held open independently of the inactive leaf. The hold-open points for each leaf lie between approx. 80° and 130°.

Note

The active leaf can be opened up to the maximum selected hold-open point (door stop to be positioned accordingly).

G-SR-EMR 2

This door co-ordinator includes an integral smoke detector. A floating (volt-free) alarm contact and connections for further detectors and external manual release devices are also provided. Technical data for smoke detectors: see page 22.

G-SR-EMF 1G

This door co-ordinator enables the active leaf to be held open independently in special door sets involving, for example, fixed side screens, narrow inactive leaves („penny farthing” doors), etc. The hold-open point lies between approx. 80° and 130°.

Note

The active leaf can be opened up to the maximum selected hold-open point (door stop to be positioned accordingly).

G-SR-EMR 1G

This door co-ordinator includes an integral smoke detector. A floating (volt-free) alarm contact and connections for further detectors and external manual release devices are also provided. Technical data for smoke detectors: see page 22.

F Approval certification

The TS 93 G-SR-EMF 1, EMF 2 and EMF 1G have been successfully type-tested to EN 1155, Electrically Powered Hold-Open Devices. Certificates are available on request.

Technical data

Power supply	EMR	230 V AC $\pm$ 10%
Max. output rating	EMR	9.8 W
Operating voltage	EMF	24 V DC, $\pm$ 15%
Power input	EMF 1	1.4 W
	EMF 2	2.8 W
Rated for continuous duty		100% ED
Release force		adjustable

F Approval certification

The TS 93 G-SR-EMR 1, EMR 2 and EMR 1G have been successfully type-tested to EN 1155, Electrically Powered Hold-Open Devices. Certificates are available on request.

Door co-ordinator **TS 93 B** with electro-mechanical hold-open G-SR/G-SR-EMF, pull side fixing

Door co-ordinator **TS 93 B** with integral smoke detector G-SR-EMR, pull side fixing

* In the case of particularly large and heavy doors (over 2500 mm), we recommend that EM hold-open magnets be employed instead of the electro-mechanical hold-open unit.

G-SR/BG slide channel door co-ordinators

Push side fixing

The G-SR/BG push-side slide channel with integral door co-ordinator, featuring a push rod clamping system for **double doors**, ensures that the active leaf always closes after the inactive leaf. As this system operates independently of the door closer hydraulics, it offers maximum safety and reliability (doors prevented from "creeping closed"). An overload release protects both the door co-ordinator and the door set from damage.

The G-SR/BG door coordinator is non-handed and suitable for combination with TS 93 G door closers.

Note

Max. opening angle 120° (door stop to be positioned accordingly).
Not suitable for emergency exit doors which are opened at the inactive leaf.

F Approval certification

The TS 93 G-SR/BG has been successfully type-tested to EN 1158, Door Co-ordinator Devices. Certificates are available on request.

G-SR-EMF/BG with electro-mechanical hold-open

G-SR-EMR/BG with integral smoke detector

These push-side door co-ordinators not only ensure the correct closing sequence of double doors, but also allow the door leaves to be individually held open. In the event of an alarm or power failure, the hold-open is released and the door is closed by the door closer. The release is triggered by a signal from the smoke detector integrated in the G-SR-EMR/BG door co-ordinator.

The G-SR-EMR DCW®/BG door co-ordinator model is also available without a power pack for integration in building management and control systems via a DCW® bus and the TMS door management system.

The pull-off force for the hold-open mechanism can be adjusted without tools and is rated to ensure that the door can also be easily released manually. The G-SR-EMF/BG and G-SR-EMR/BG door co-ordinators are non-handed and suitable for combination with TS 93 G door closers.

Not suitable for emergency exit doors which are opened at the inactive leaf.

Regulations/Information

The use of hold-open devices may be subject to certain conditions – see page 27.

The smoke detector unit has to be replaced after 8 years according to DIN 14677.

Having reached the replacement time, a light-emitting diode will light continuously.

G-SR-EMF 2/BG

With this door co-ordinator, the active leaf can be held open independently of the inactive leaf. The hold-open points for each leaf lie between approx. 80° and 120°.

Note

The active leaf can be opened up to the maximum selected hold-open point (door stop to be positioned accordingly).

F Approval certification

The TS 93 G-SR-EMF 2/BG have been successfully type-tested to EN 1155, Electrically Powered Hold-Open Devices. Certificates are available on request.

Technical data	
Power supply EMR	230 V AC ± 10%
Max. output rating EMR	9.8 W
Operating voltage EMF	24 V DC, ± 15%
Power input EMF 2	2.8 W
Rated for continuous duty	100% ED
Release force	adjustable

G-SR-EMR 2/BG

This push-side door co-ordinator includes an integral smoke detector. A floating (volt-free) alarm contact and connections for further detectors and external manual release devices are also provided. Technical data for smoke detectors: see page 22.

F Approval certification

The TS 93 G-SR-EMR 2/BG has been approved by the German Institute for Building Technology, Berlin, for use as a hold-open unit. Acceptance inspection of the system is mandatory.

Door co-ordinator **TS 93 G** with electro-mechanical hold-open G-SR/BG / G-SR-EMF/BG, push side fixing

Door co-ordinator **TS 93 G** with integral smoke detector G-SR-EMR/BG, push side fixing

* In the case of particularly large and heavy doors, we recommend that EM hold-open magnets be employed instead of the electro-mechanical hold-open unit.

Smoke detectors

The RMZ and RM-N smoke detectors provide the ideal complement to the TS 93 system for passive/preventive fire protection. They are designed in accordance with the latest codes issued by the German Institute for Building Technology and ensure perfect interaction between all the devices employed for holding open fire and smoke check doors – whatever the situation.

RMZ

The RMZ smoke detector in the Contur design provides a 24V DC supply for all the hold-open devices connected to it. In the event of an alarm or power failure, it de-energises the devices (release function). It has an automatic reset which can be switched to manual mode if required. A floating (no-volt) change-over contact and connections for both further detectors and for an external manual release device are also provided. The unit is available in the RMZ version with a stabilised power pack, or in the RMZ DCW® version without a power pack for integration in building management and control systems via a DCW® bus and the TMS door management system.

The smoke detector unit has to be replaced after 8 years according to DIN 14677. Having reached the replacement time, a light-emitting diode will light continuously.

RM-N

The RM-N smoke detector ensures the early detection both of smouldering fires and open fires with smoke evolution. It can be connected to all dormakaba hold-open systems.

F Approval certification

The RMZ and RM-N smoke detectors have been granted general building approval by the German Institute for Building Technology, Berlin; acceptance inspection mandatory in Germany.

Accessories for single doors

30 mm mounting backplate for G-N

For fixing the slide channel to the door frame where direct fixing is not possible.

40 mm mounting backplate for G-N, EMF, EMR

For fixing the slide channel to the door frame where direct fixing is not possible.

Angle bracket for G-N

For push-side fixing of the slide channel to door frames with a deep reveal.

Angle bracket for G-EMF

For push-side fixing of the slide channel to door frames with a deep reveal.

Accessories for double doors

40 mm mounting backplate for G-SR
 For fixing the slide channels to the door frame where direct fixing is not possible.

40 mm mounting backplate for G-SR/BG
 For fixing the slide channels to the door frame where direct fixing is not possible.

Angle bracket for G-SR/BG
 For fixing the slide channels to door frames with a deep reveal.

G-SR pivot block

If the G-SR door co-ordinator is to operate independently of the TS 93 door closer, for example, in combination with the ED 100/ED 250 automatic swing door operator, the connection between the door co-ordinator and the door leaf is provided by means of G-SR pivot blocks.

F Approval certification

The G-SR door co-ordinator with pivot blocks has been approved by e.g. the State Material Testing Authority, Dortmund/Germany, for use on double fire and smoke doors.

G-SR pivot block for door co-ordinator

ED 100/ED 250 automatic swing door operator

ED 100/ED 100 automatic swing door operator
with G-SR door co-ordinator and G-SR pivot block

Hold-open systems Regulations/Information

The use of hold-open systems is subject to special regulations based on official approval requirements. These relate in particular to the final inspection (acceptance), continuous monitoring and maintenance.

The regulations and instructions provided below are intended as an aid, pursuant to statutory regulations that apply e.g. in Germany, to ensure that all participants are properly informed of the most important requirements that relate to the installation and operation of hold-open systems.

Further information can be found in the following documents:

- Code of practice relating to hold-open systems issued by the German Institute for Building Technology, Berlin
- General building regulations pertaining to the approval of the hold-open system concerned
- DIN EN 1155
- DIN EN 14637
- DIN 14677

1. General

1.1 In the case of fire doors (and similar shutters/closures/barriers) that are held open by hold-open systems, the sweep area necessary for the closing operation must be kept constantly clear. This area must be clearly identified by lettering, floor markings or similar. Where necessary, structural measures must also be implemented to ensure that cables, leads, lines, pipes, stored/deposited goods or components (e.g. false ceilings or other overhead items/elements) are reliably prevented from falling into the sweep area.

1.2 Wherever possible, smoke detectors should be used for hold-open systems. For hold-open systems for fire doors in emergency escape routes, smoke detectors must be used.

1.3 Each hold-open device must also be capable of being released by hand, without adversely affecting the functional capabilities of the automatic release device. In the case of door closers with electro-magnetic hold-open, the manual release may be performed by a small tug applied to the door leaf. If holding electro-magnets or free-swing door closers are used, a pushbutton must be provided to facilitate manual release. The manual release pushbuttons employed for this purpose must be red and carry the wording "Close Door" or equivalent. The pushbutton must be located in the immediate vicinity of the door and must not be concealed by the door when this is held open.

2. Commissioning

2.1 In Germany and countries governed by DIN regulations: Following on-site installation of the operable hold-open system, its functional integrity and quality of installation must be confirmed by an acceptance in-spection procedure. The acceptance inspection may only be performed by skilled personnel of manufacturers of monitoring and/or hold-open devices, skilled personnel authorized by same, or skilled personnel from an accredited inspection agency.

2.2 In Germany and countries governed by DIN regulations: Once the acceptance inspection has been successfully completed, the operator shall permanently fix on the wall, in the immediate vicinity of the door, a plate supplied by the manufacturer of the hold-open system measuring 105 mm x 52 mm and carrying the inscription:
Hold-open system
Inspected by... (company logo with month and year of acceptance inspection) or equivalent

2.3 The operator is to be provided with a certificate detailing the successful acceptance inspection; this certificate must be retained by the operator.

3. Routine Inspection

3.1 The hold-open system must be kept by the operator in a constantly good operating condition, and inspected at least once a month to ensure that it is functioning properly.

3.2 In addition, the operator is obliged at least once a year, or at shorter intervals if specified in the approval certificate, to inspect all the devices to ensure that they are operating and interacting properly and without fault, and to carry out or instigate adequate maintenance. The associated test, inspection and the maintenance work may only be performed by an expert or an appropriately trained person.

3.3 The scope, result and time of the periodic inspection are to be recorded. These records must be retained by the operator.

Specification text single doors

TS 93 N EN 2-5 / EN 5-7

Cam action door closer conforming to EN 1154, carries the CE mark, Contur design, with rapidly decreasing opening torque/force. Door leaf fixing on the pull side, transom fixing on the push side. Closing speed, latching speed, hydraulically controlled backcheck and delayed action conveniently adjustable at valves accessible from the front.

Mounting bracket with universal fixing hole system. Non-handed. Height-adjustable slide channel.

Optional

- ☐ With retrofittable cushioned limit stay for integration in the standard slide channel.
- ☐ With retrofittable mechanical hold-open unit (RF), hold-open point adjustable between 75° and 150°.

Use of mechanical hold-open units is not permitted on fire and smoke check doors.
